Subject No. 102.
(a) Nagannana Anikat.

Summary of discussion.—(*a*) The level of the anikat (called Nagannana anikat) across Tirthahalla which flows from Kalhatti and passes through Lingadahalli, should be raised and a channel excavated from the anikat up to Bagavati Katte. If this is done, Sunnadahalli tank, Ramanayakankere and other tanks, about 8 or 10 in all below Bagavati Katte, will have abundant water-supply and will serve as sources of irrigation for many lands. This step will not only tend to increase the Government revenue but will also improve the condition of gardens and will also serve as a good water-supply to the town of Tarikere. This work has been suggested more than once ere this. The D. P. W. should be directed to begin the work early.

(b) Guddada Mallenahalli Tank.
